To Whom it May Concern:

This is to certify that Chemblend CB2 (S60-045) brand developer, Chemblend Ultra-Clean (S60-049) brand fixer, HS Manual brand developer and HS Manual brand fixer, have been formulated so as not to pose an unreasonable risk to health, safety, and property when transported in commerce and is not listed in the charts of CFR 49.172.101. Therefore it does not meet the criteria of the definition of hazardous materials / hazardous substances as outlined in CFR 49.171.8 and is a non-hazardous material.

These chemical packages have been designed and packed in accordance with UN regulations for hazardous materials despite the fact that they are non-hazardous. The outer carton and the inner packages will withstand UN tests for durability in transit and during handling.

Should you have any further questions, please feel free to contact our Regulatory and Packaging Quality manager, Vance Dykhuis.

Sincerely,

Jason M. Simon
General Manager
